

Enterprise Architecture Audit and Review

We use a reliable, repeatable methodology and our Enterprise Architecture Center of Excellence (EACOE) consultants audit and review your current state and capability to perform a successful future Enterprise Architecture (EA) implementation.

Conducting a successful Enterprise Architecture implementation requires readiness. With EACOE's Enterprise Architecture Audit and Review service, our consultants work with you to examine your organization's ability to execute an EA implementation effort successfully. We also help you address any gaps that would potentially stall an EA effort and develop a roadmap for preparing your organization for implementing it. After identifying any gaps, EACOE will work with you to rectify the identified deficiencies.

EACOE can assess your organization's current capacity as it relates to the requirements needed for an EA implementation. We do this methodically, establishing traceability between your organizational artifacts and strategies, and then mapping these artifacts and strategies back to our proven methodology.

We apply the EACOE methodology based on the frame of reference/ontology outlined by John Zachman, and The Enterprise Framework.

EACOE certified architects analyze your organization's artifacts to determine its current capacity.

The EACOE Approach:

- An independently assessed EA implementation capacity
- EA implementation gap analysis
- Validation of an EA implementation plan
- Recommendations and Roadmap for successful EA implementation effort
- Flexible methodology that supports the incorporation of DODAF, TOGAF, and other implementation frameworks
- Reduced EA implementation costs due missing or incomplete essential artifacts

Components

Review/Audit – Learn to use a proven EA methodology to assess your organization's capacity to conduct an EA implementation from an analysis and mapping of artifacts to your defined business strategies.

Executive "Findings" Briefing – Learn from a detailed briefing highlighting gap analysis between the current state and desired state of the organization's ability to execute an EA implementation.

Recommendations and Road Map - Learn to define recommendations of future steps along with a road map that will prepare an organization for an EA implementation effort.

All services are offered on a fixed-fee basis.
